

2021 Agreement of remaps for all AMTuning Customers.

Thank you for choosing AMTuning Ltd to carry out your fully customised engine remap. We are dedicated to bringing you a quality product which you are fully satisfied with. However, please make sure that you read and understand the following points. If you are not happy with any of these, please make sure that you make us aware before we start the process.

- ❖ All power, torque and mpg figures quoted are estimates. The figures we provide are the figures gained from the same vehicle as yours on a dyno after applying our software. If you dyno your vehicle after our remap without having a dyno before, then you must understand that, without an original figure, the final power output cannot be questioned.
- ❖ The % gains quoted can differ from car to car. There are also many external factors that affect MPG figures, such as driving style, temperature etc. AMTuning Ltd cannot be held responsible if your vehicle does not meet the expected MPG gains.
- ❖ Any mechanical or electrical failure after a remap is carried out will not be linked to and is not the responsibility of AMTuning Ltd Remapping sometimes emphasises an issue already present in a vehicles engine. For example, whilst a vehicle may not have any known problems showing on a diagnostic check or the dashboard, it may, say, have a turbo approaching the end of its life. This will not be evident to the customer or to AMTuning Ltd. Applying a remap may cause the turbo to fail sooner than it would have done anyway. There will be no refunds for any such problems after a remap.
- ❖ As the owner of the above vehicle, you know, to the best of your knowledge that there are no faults/mechanical issues with the engine or vehicle that may hinder or effect the remapping process. We carry out a full diagnostic check before and after however this doesn't always show every fault in the vehicle.
- ❖ As the current keeper of the vehicle, it is your responsibility to know the past history of your vehicle and whether it has been modified or remapped prior to AMTuning Ltd working on it. If you know it has been modified/remapped, then you must make the AMTuning Ltd remapping agent aware immediately before we begin our process. In the very unfortunate event that a previous remap causes ECU failure, AMTuning Ltd will not be held responsible.
- ❖ In the extremely unlikely event of an ECU failure during the remap process, AMTuning Ltd cannot be held responsible, as this could easily be due to a problem over which we have no control. For example, an existing fault within the ECU brought to the forefront by the process or, for example, an unexpected power fault.
- ❖ The lifetime software warranty covers you for software re-installation. For example, if your vehicle software is reset to the original by a dealer or garage, then we will re-apply the remap free of charge. This is for the lifetime of the above vehicle. However, this free service is only available once. If your software is reset again after this, we can apply the remap for free, but labour costs would be incurred.
- ❖ A missing DPF, EGR or Catalytic, where one was fitted when the vehicle was built can result in an MOT failure. These modifications are meant for track use only and are deemed illegal in the UK for road vehicles. By agreeing to have any of the above removed, You accept at your own responsibility potential penalties

I confirm that I have read and agree to the above terms and conditions.
